

Central Vt Civic Center

Gallison Hill Rd

U32 School (existing trails shown in purple)

Power Plant Rd

Route 2

Approach to bridge site also requires engineering and specialized construction.

Trail construction is underway on conserved land along river to east.

New 200 ft bridge at Winooski River built on old railroad bridge abutments is centerpiece of the project; for which engineering is complete.

Cross Vermont Trail construction project (shown in red)

In addition to bridge over Winooski and approach to bridge along Rte 2, project includes over two miles of new trail meeting universal accessibility guidelines.

A keystone project joining the planned Central Vt Path to the west, East Montpelier Loop Trail to the north, and Cross Vermont Trail to the east.

Creating safe, and scenic, alternative to what is currently the most problematic on-road section along Cross Vermont Trail state wide route.
